Intelligent Cabinet

Consumer Purchase Process

1. Consumer opens the cabinet using their credit card
2. Door unlocks
3. Customer selects items. All items are uniquely identified using sustainable, paper based anti-tamper RFID tags
4. Fridge re-locks, performs inventory reading and displays purchases on screen. Customer receives purchase receipt to phone.
5. Retailer or brand owner receives real-time information about stock, purchases and use-by dates

Intelligent Cabinet Management

Software driving efficient operations

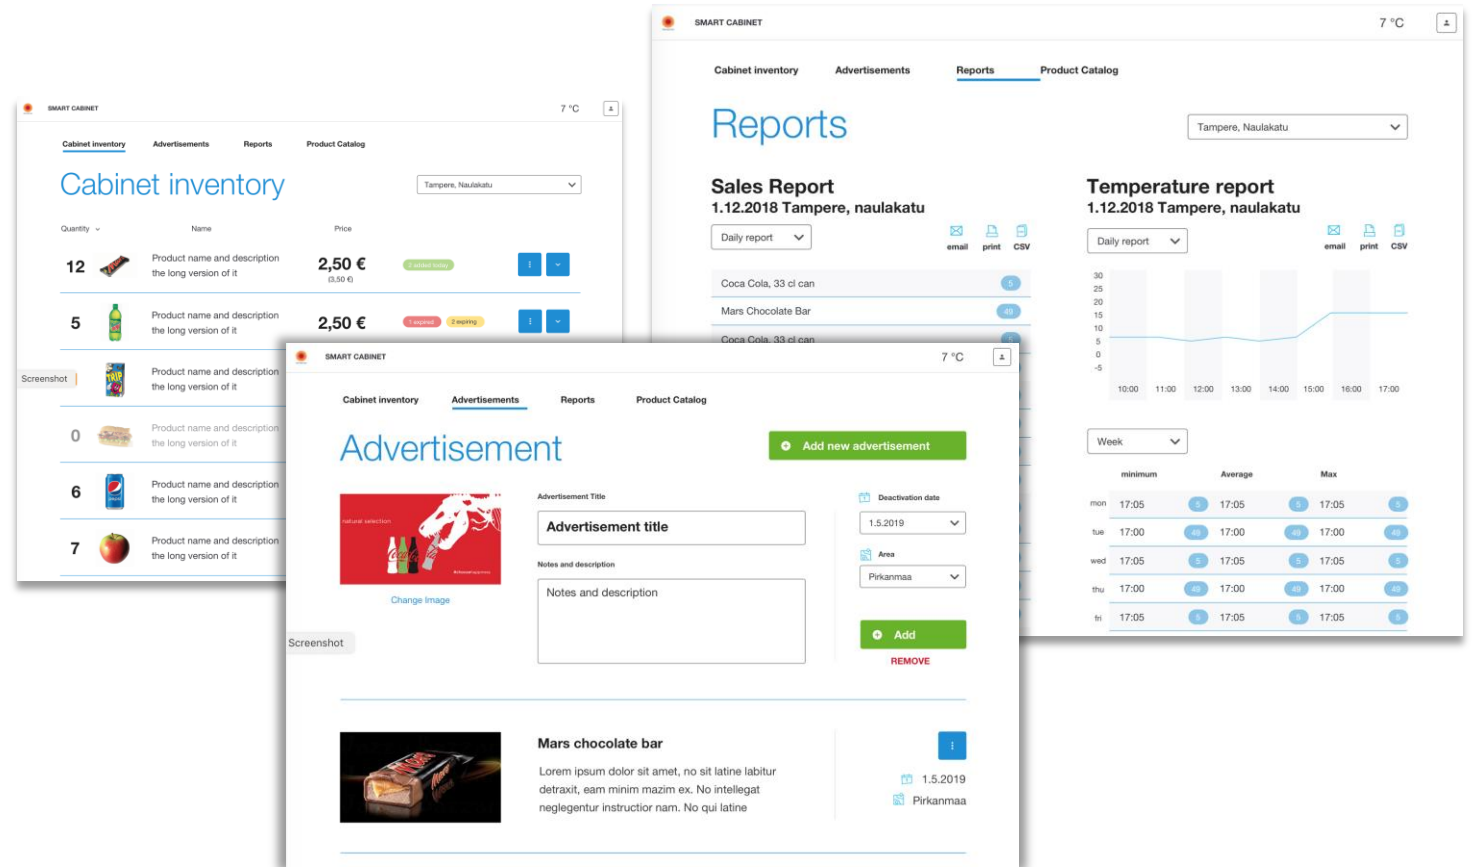

Cabinet is managed through web-based software solution:

Management service

- Inventory management
- Promotions broadcasted in screens
- Sales reporting
- Ability to connect through API with common PoS infrastructure

ReFill app

- Made for replenishment automation
- Allows operator to open the cabinet and perform replenishment

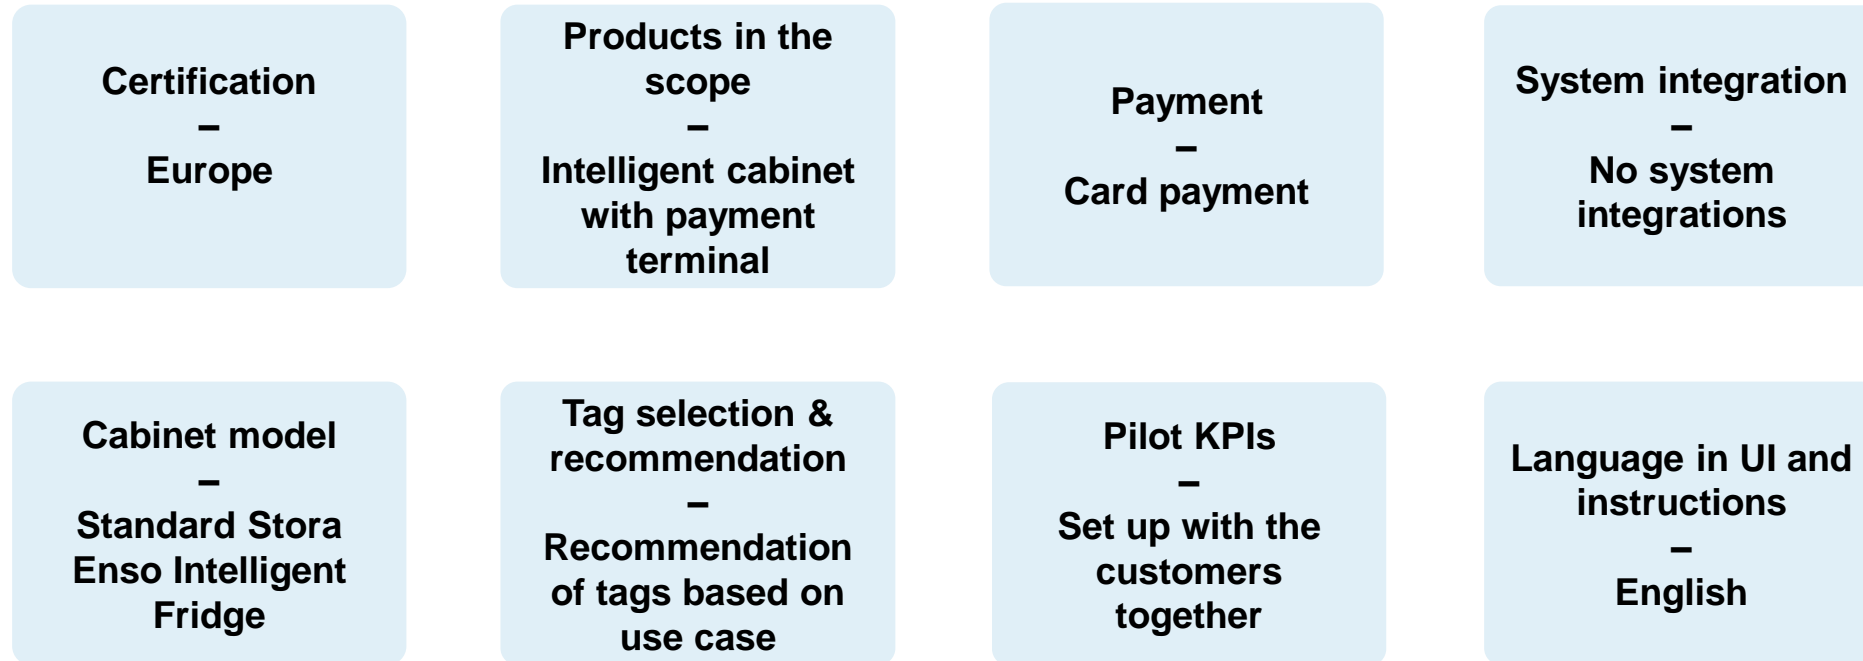

Applications of Intelligent cabinets to businesses in Covid-19

- Use case: Contactless shopping with **self-checkin, self-checkout and self-payment** via intelligent cabinets
- Covid-19 relevance:
 - **Minimizing the spread of virus:**
 - Cashierless check in and check out remove unnecessary interactions
 - Fast and efficient purchasing journey: Multiple items can be purchased at once, thus reducing queuing time
 - **Real time inventory status:**
 - Sales performance of individual items can be reviewed in real time
 - Know when cabinet runs out of inventory and when replenishment should happen
 - **Efficient update to your customers with latest information**
 - Update your customers with latest news from your business using the LCD screen on top of the cabinet
